CONCLUSION

INTRODUCTION

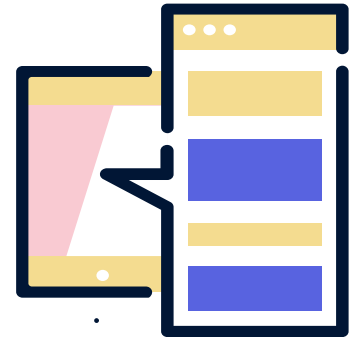

1. There are many unused lockers on campus, and booked lockers in the office is getting old.
2. payment in the locker reservation system is either by card or cash, which we believed would make the locker reservation process easier and more accurate.
3. The widespread availability of the Internet and the use of computers is one reason of the creation of locker reservation system where students can book and pay online.

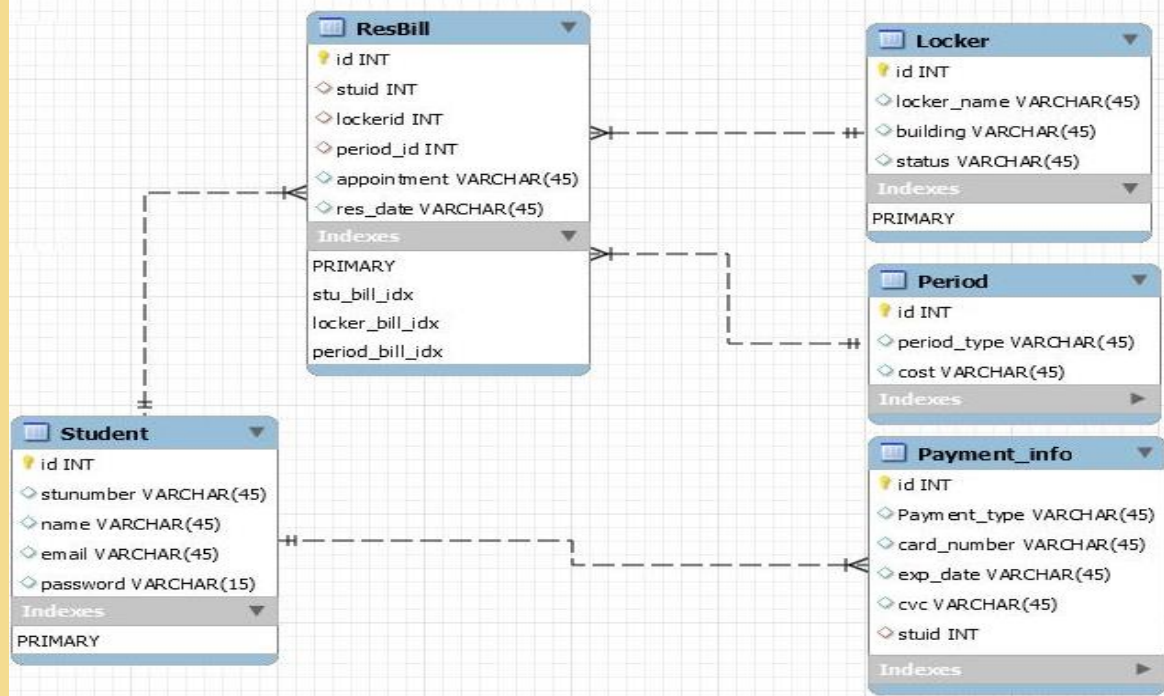

PROJECT OBJECTIVES

The following are the key objectives of our project :

1. Conduct a review of literature regarding locker reservation systems.
2. Identify the issues and requirements of locker reservation system.
3. Develop website for locker reservation system.

TOOLS

Visual Studio Code:
the text editor that
helps us to write
all website pages
HTML,CSS, JavaScript,
Bootstrap ,and PHP.

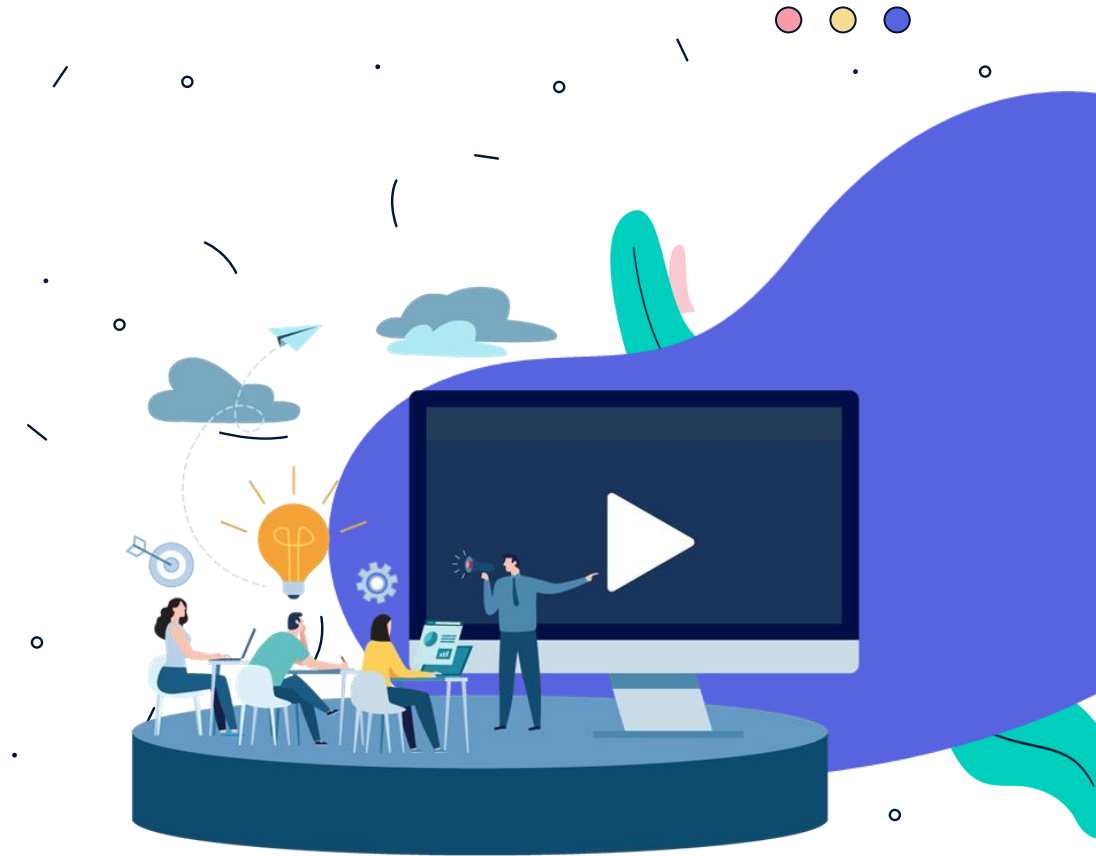

Wamp:
Allows to install a
MySQL web server and
database server
on computer
allowing you to
designing, programmig
, checking and
repairing websites.

PhpMyAdmin:
A free / open source
tool to enable system
administrators to
manage MySQL
databases on the
Internet.

DEMO

CONCLUSION

- Reserve your locker is website designed to help student to choose ,pay then reserve a locker online.
- During first semester we analyzed the system and choose the suitable process to implement it by designing the UML diagrams and use a purposed interfaces design.
- During second semester we implemented the system and test it to ensure that it meets the user requirements.
- Challenges: we faced many issues to get to the most logical design of the database, and we faced many problems regarding analysis and design and waiting response to obtaining enough information from university officials about the issue of lockers.
- Future work:
 - creating mobile application for the system.
 - present the idea to university to adopt it.
